FACES Updates Concerning ICPC

As part of the ongoing development and implementation of NEICE (National Electronic Interstate Compact Enterprise) new fields have been added to ICPC connected screens including the ICPC Information Screen and Referral screen. These fields include: NEICE Case ID and NEICE Child ID. This information will be generated by the NEICE system and downloaded by MO ICPC child placement coordinators into FACES. Field staff will not be responsible for entering this information. This practice alert is being issued to make certain you are aware of changes you will see in the ICPC screens moving forward as well as some changes in functionality as described in the following paragraph.

As part of the NEICE development in FACES, buttons are being added to the Referral screen and the ICPC Information screen to allow for auto populated forms to be printed for ICPC cases. These forms include the ICPC 100A, ICPC 3, and the CD ICPC 104 which will be available through the Referral screen and the ICPC 100B form through the ICPC Information screen. Once staff have completed the referral screen for a new referral, the forms indicated above will be available to be printed via print buttons available at the bottom of the Referral screen. A print button has also been added to the ICPC Information Screen which will allow for the auto populated 100B to be printed. This print option will be available when the required information has been entered into the ICPC Information screen by the case manager following placement of the child in an approved ICPC home out of state.
